3:00 PM to 4:15 PM Eastern
Tue, Jan 18, 2005
5:00 PM to 6:15 PM Eastern
Thu, Jan 20, 2005
10:00 AM to 11:15 AM Eastern

Pain is the most common reason for people to seek medical attention. Up to 25 percent of patients describe pain symptoms to their healthcare providers. The costs associated with pain are an estimated \$100 billion annually, with more than \$50 million in lost productivity in employee absences. Working with key opinion leaders in pain management, this program reviews pain assessment and treatment options for managing moderate, acute pain.

Objectives:

- Define pain and its various subtypes
- Describe consequences of pain, quality-of-life issues, and prevalences
- Identify concerns about prescribing opioids
- Differentiate between addiction, physical dependence, and tolerance

Target Audience:

This satellite broadcast is for primary care physicians, surgeons, nurses, physician assistants, nurse practitioners and other healthcare professionals involved in the care and treatment of patients with pain.

This program is made possible by Ortho-McNeil Pharmaceuticals
